We see it through your eyes.™

Quality controlled.

RIQC provides real-world training and troubleshooting for radiographic quality control issues. We are deep in experience and prepared to optimize the image quality of your facility to meet or surpass industry standards.

We have served the QC needs of many of the nation's premier medical institutions, from the Memorial Sloan-Kettering Cancer Center in New York, to the University of Southern California Medical Centers in Los Angeles.

Our services are tailored to the needs of hospitals, healthcare centers, private practices and professional radiologic technologists.

ONSITE CONSULTING

Troubleshooting and one-on-one training at your imaging facility.

LECTURES, SEMINARS AND WORKSHOPS

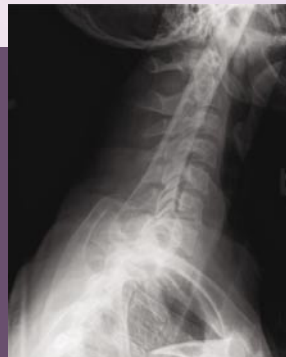

Lectures, seminars, onsite workshops and symposiums produced at medical, educational or special-event venues. Private workshops are also available.

QUALITY CONTROL SUPPORT PLANS

Our QC maintenance and web-based support programs are designed to keep your imaging techniques operating at maximum levels.

We believe that every image has the potential to save a life. Therefore, it is our responsibility to be sure that our clients' images will stand up to the most critical medical evaluation.

**Simply stated, with RIQC...
your quality is controlled.**

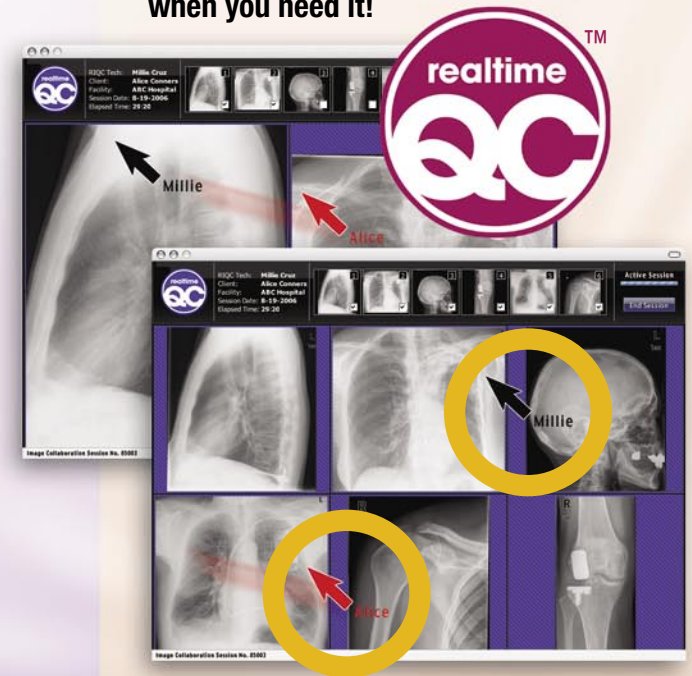

Count on RIQC's knowledgeable and conscientious consultants to make sure your facilities and staff are meeting the strictest radiographic standards for quality control.

RIQC will address these factors and more...

- **Basic radiography physics**
- **Creation of a CR image**
- **Influence of radiographic techniques on a CR/DR image**
- **Importance of positioning**
- **Interpretation of sensitivity values**

Call us today at 818-307-0007 or visit www.riqc.com for additional information.

**Imagine...instant, on-site
quality control
when you need it!**

With our proprietary new technology, your images can be evaluated in real time with a skilled RIQC technologist. No hardware or software required, RealtimeQC™ can be accessed from any computer with a high-speed internet connection.

Web-based QC support for CR and DR, as easy as...

1. Upload your problem images using any browser
2. Call your expert RIQC Support Tech
3. Collaborate as you each use your own pointer

Radiography image problems can often be diagnosed through collaboration and visual interpretation. RIQC's RealtimeQC™ program allows you to upload your images to a secure server where both our tech and yours can control separate, color-coded pointers as they precisely co-inspect selected images.

RealtimeQC™ is the affordable way to protect your imaging facility.
